C.1

PREFACE

This technical services monograph presents highlights of the occupational employment projections from 1988 to the year 2000 in tabular form for Maine's Northeastern Region, which is Penobscot, Piscataquis, and Hancock counties combined. No narrative accompanies these tables. This monograph provides a quick handy reference to such basic questions as: What occupations are expected to show the largest growth between the years 1988 and 2000, or what occupations had the greatest number of employees in 1988. Employment estimates in this monograph are not rounded. However, this is not meant to imply a degree of accuracy to the last digit, as these are statistical estimates and not precise counts.

Technical Services Monograph JIS-40 has already been published which presents summary highlight tables of occupational and industrial employment projections for Maine, statewide, and the United States for this same time period, 1988 to 2000.

Any questions or comments regarding the contents of this document may be directed to Wendy L. Nelson, OES Program Manager at (207) 289-2271.
